

NEW FLYER CNG

20 years EXPERIENCE.

MORE THAN 6,200 CNG BUSES DELIVERED OR ON ORDER TO 80 CUSTOMERS.

BENEFITS OF NEW FLYER CNG BUSES

New Flyer brings almost two decades of expertise to the design and manufacture of CNG buses.

Our CNG system is engineered specifically for New Flyer buses and is integrated into the bus design, not just bolted on.

We meet or exceed today's CNG standards and safety requirements including a complete fire suppression system on every bus, going beyond the mandatory detection-only system.

Our buses are designed for a 350 - 400 mile range, and we install 20-year certified CNG tanks exclusively, not just as an optional "extra".

New Flyer CNG buses are powered by a Cummins engine with available transmission options of either Allison, Voith or ZF.

TYPE AND SIZE

Available in 35', 40' and 60' platforms, the Xcelsior® patented design can incorporate any of our wide variety of propulsion systems and is a proven and reliable addition to any fleet.

The reduced weight of the Xcelsior® will deliver improved fuel economy, will require less maintenance over its life and the customer-focused design will provide your passengers with the best ride experience.

LIFETIME CUSTOMER CARE

All New Flyer vehicles are supported by the industry's most comprehensive service and support network. With aftermarket parts, field services, technical support, training, technical publications and comprehensive product warranties, New Flyer is committed to providing you with the **Best Bus Value and Support for the life of your bus.**

Buy-America compliant and a proud supporter of American jobs.
